**Summary — Full-Stack Developer** skilled in the **MERN stack**, building **scalable web applications** and **real-time systems** with a focus on clean architecture and performance.

## Technical Skills

**Frontend:** JavaScript, React, HTML5 & CSS3

**Database:** MongoDB (Mongoose)

**Backend:** Node.js, Express.js, MongoDB

**Tools:** GitHub, VS Code, Postman

**Languages:** C++, JavaScript

**Others:** Data Structures & Algorithms

## Education

**Chhotu Ram Rural Institute of Technology**

New Delhi, Delhi

Diploma in Computer Science

2024 – 2027

**Kids Camp International School**

Muzaffarpur, Bihar

Class X (CBSE) — **78%**

2024

## Experience

**AKM TECHIE**

June 2025 – July 2025

*Frontend Web Development Intern*

- **Developed** a multi-page responsive website with modern UI components including admin dashboard, client portal, and service pages.
- **Created custom CSS styling** ensuring visual consistency and responsive design across all devices.
- **Implemented interactive user interfaces** for contact forms, service demonstrations, and business statistics display.

## Projects

**AI Interview Preparation Platform**

*React.js, Node.js, Express.js, MongoDB, JWT, REST API*

- **Engineered a full-stack AI-powered interview preparation platform** enabling resume uploads, and automated interview report generation from job descriptions.
- Built a **modular MVC backend architecture** (controllers, routes, models, middleware, services) ensuring **scalability and maintainability**.
- Integrated **JWT authentication with protected routes** for secure user sessions and API access.
- Leveraged **AI services** for resume analysis and **intelligent interview report generation**.
- Enabled **resume upload & download functionality** and implemented **AI-driven candidate evaluation** with **match scoring** and **skill gap analysis**.

**Uber-Backend System**

*Node.js, Express.js, MongoDB, Socket.IO, Razorpay*

- **Designed and developed a scalable ride-booking backend system** with user authentication, **ride lifecycle management** (request → accept → ongoing → complete), and driver assignment
- Implemented **real-time communication using Socket.IO** for ride requests, driver notifications, and **live status updates**
- Integrated **Razorpay payment gateway with HMAC-based signature verification** for **secure transactions**
- Added **OTP-based ride verification** to ensure **authorized ride starts** and enhanced security

**Chat Application**

*MERN Stack, Socket.IO, JWT Authentication*

- **Architected MVC-based backend** with clear separation of controllers, routes, models, and middleware.
- Established **JWT authentication and authorization** securing **protected routes** and user sessions.
- **Implemented secure token handling** using JWT with blacklist mechanism for **logout/session invalidation** and improved authentication security.
- Enabled **real-time communication using Socket.IO** for **instant messaging**, typing indicators, and online status.
- Implemented **API rate limiting middleware** to control request frequency, **prevent abuse**, and improve backend security.

## Achievements

- **LeetCode Problem Solving:** Solved **100+ DSA problems** and earned badges for **consistent performance** and strong algorithmic thinking.
- **Internship Certificate:** Successfully completed internship with **hands-on project experience**.
- **Project Portfolio:** Delivered **4+ full-stack projects** with real-time features and production-ready code.
- **Backend Engineering:** Built scalable systems with **JWT authentication, real-time communication (Socket.IO), and API security** including rate limiting and token management.
